

MEIERHOFER

Recognize potential

The company

Linking people, medicine and IT: MEIERHOFER is a technology enterprise in the healthcare sector that does business throughout Europe. MCC is its scalable information system that networks physicians, the nursing staff and administration. Oriented to the needs of the medical sector, the system was introduced in 1994 and has been adapted constantly to hospitals' growing requirements. The Munich-based company currently supports more than 200 facilities where MCC is used either as a comprehensive HIS or a specialty department solution.

One system for individual needs

As an instrument for planning, control, documentation, evaluation and invoicing, MCC simplifies routine tasks in the OR,

in the ward and in administration. The system's distinguishing characteristics include its integration and functional depth and an intuitive user interface. It helps to optimize workflows, improve treatment quality and reduce costs.

MEIERHOFER changed the technological basis of MCC, its scalable information system, to Microsoft .NET in 2003. This was the first step toward developing a trend-setting solution. When it introduced MCC.NET in 2004, the company established itself as a competent and trustworthy partner for HIS projects in the healthcare sector.

From surgical centers to university hospitals

MEIERHOFER's circle of customers includes everything from surgical centers to regional clinics and university hospitals. MCC is currently used at approximately 22,000 workstations – either as a comprehensive HIS or as a specialty solution for specific departments such as the OR – through-out Europe. Round about 55,000 user are currently working with the system. Customers working hospitalwide with MCC are amongst others Neumarkt, Siegen and Remscheid. At the University Hospital Erlangen and in several other Austrian hospitals, MCC in the OR is successfully working as an integrated part of the hospitalwide HIS.

The company

As a client-ready solution, MCC can manage an unlimited number of facilities, which is why MCC is also an attractive solution for healthcare groups. In 2005, the private group that operates Sana Hospitals decided to use MCC together with SAP applications for the administration part in all Sana facilities.

MEIERHOFER also collaborated with Sana Kliniken AG to develop a special solution based on MCC that meets special requirements in heart, thorax and vascular surgery. This special solution is being successfully used in the Sana Heart Centers in Stuttgart, Cottbus, Dresden and Lahr.

An experienced team

Originally founded as MEIERHOFER EDV-Beratung (IT consulting) in 1987, MEIERHOFER AG currently has more than 80 employees. The interdisciplinary team of physicians, computer specialists and economists deals with its customers' individual needs in a competent and effective manner. From project analysis to actual operation, it supports healthcare facilities with years of industry experience and concepts that have been tried and tested in actual practice.

MEIERHOFER has its headquarter in Munich. Branches in Hanover and Passau ensure proximity to German customers. Through subsidiaries with establishments in St. Valentin (Austria) and Liebefeld near Bern (Switzerland) MEIERHOFER positions itself in the European market for healthcare IT.

By collaborating with leading SAP vendors such as RZV GmbH (G), ATSP (AU) and Exsignio Stäfa Group (CH), the HIS-supplier completes its portfolio.
